How Mixed Methods Informs and Enhances Qualitative Research

Abstracts due: March 1, 2014
Papers due: August 31, 2014

Much has been written about the usefulness of mixed methods research approaches for addressing complex research needs. It follows that there exists a need for high-quality examples that guide, yet encourage innovation for qualitative-focused researchers. This special issue will include manuscripts covering a range of topics pertinent to mixed methods research that illustrate its use for informing and enhancing qualitative research. These topics include, but certainly not limited to:

- Conversations that were started at the 2013 Advances in Qualitative Methods (AQM) conference.
- Examples of integrating mixed methods into qualitative research.
- Discussions of current innovations, challenges, and future directions in mixed methods research and qualitative research.

Abstracts should be 500-1,000 words in length describing the purpose of the manuscript and whether it be a theoretical paper or methodological reflection on empirical research.

To submit an abstract or for further information please contact cpoth@ualberta.ca or tonyonwuegbuzie@aol.com
